

LARGE SCALE FIRE TESTING

FIRE TESTING OF BUILDING MATERIALS AND
ASSEMBLIES

What We Do

These tests expose wall systems, floor systems, and firestop/penetration to a Standard Fire for a specific hourly duration i.e. a time / temperature curve that is then followed by a required hose stream test.

QAI's Laboratories expertise in fire testing can help you with your code compliance when it comes to fire testing. QAI Laboratories have been performing fire testing for years and have two locations where the ASTM E119, NFPA285, ASTM E814, CAN/ULC S101, CAN/ULC S115 and a multitude of other tests are performed. QAI Laboratories can guide you through the code compliance process to streamline your product from factory to market.

QAI Offers

- Flame stops to fire stops
- Load and Non-Load Bearing Capabilities
- Fire Tests of Fire Stop Penetration Systems
- QAI Certification for either the US and/or Canada
