

NFPA 80 FIRE DOOR FIELD EVALUATION AND LABELING

INSPECTION AND RELABELING SERVICES
TO RESTORE FIRE DOOR COMPLIANCE

Fire rated door assemblies must remain properly labeled and maintained to comply with building codes and life safety regulations. QAI provides NFPA 80 field evaluation and labeling services to help building owners, contractors, and facilities address issues efficiently.

Scope of Service

QAI evaluates existing fire door assemblies and protective openings when labels are missing, illegible, or damaged, or when an existing assembly has been modified in the field. Typical services include:

- Field evaluation of fire rated door assemblies and frames
- Assessment of the protective opening and surrounding construction
- Application of QAI NFPA 80 field inspection label where applicable
- Written report with opening data sheet and evaluation findings
- Support for building owners on Authority Having Jurisdiction requests

QAI's field evaluation and labeling services are commonly used when building owners or contractors must confirm the compliance of existing fire door assemblies. Typical applications include:

- Fire door labels painted over or damaged during maintenance
- Missing or illegible labels identified during inspections
- Renovation or retrofit projects affecting fire rated openings
- Facilities preparing for building or fire code inspections
- Commercial buildings requiring third party verification
- Hospitals, schools, offices, and multi-unit residential properties
